What projects is EMSA currently working on?

EMSA is currently working on the following projects:

1. **Coastguard Cooperation Framework (CCF)**: This project aims to improve the cooperation between the European Union’s member states and third countries in the area of coastal and marine environmental protection, maritime safety, and national security. The project involves the development of a common legal framework and operational procedures for cooperation at sea, including the use of new technologies and methods for monitoring and enforcement.

2. **Ocean Environment Protection (OEP)**: This project focuses on protecting the ocean environment from pollution, including emissions from ships. The project involves the development of new monitoring and enforcement tools, as well as the implementation of new regulations and guidelines.

3. **Maritime Security and Emergency Response (MSE)**: This project aims to improve the preparedness and response capabilities of Member States to maritime security incidents and emergencies. The project involves the development of new tools and technologies for monitoring and response, as well as the improvement of coordination and communication between Member States.

4. **Shipping Emissions Monitoring (SEM)**: This project focuses on monitoring and reducing emissions from ships, including NOx, SOx, and CO2 emissions. The project involves the development of new monitoring and enforcement tools, as well as the implementation of new regulations and guidelines.

5. **Maritime Charter (MC)**: This project aims to improve the coordination and cooperation in marine protection and development. The project involves the development of new tools and technologies for monitoring and enforcement, as well as the improvement of coordination and communication between Member States.

6. **Maritime Transport Management (MTM)**: This project focuses on improving the efficiency and sustainability of maritime transport. The project involves the development of new tools and technologies for monitoring and enforcement, as well as the improvement of coordination and communication between Member States.

7. **Maritime Safety and Security (MSS)**: This project focuses on improving the safety and security of maritime operations. The project involves the development of new tools and technologies for monitoring and enforcement, as well as the improvement of coordination and communication between Member States.

8. **Maritime Environment Protection (MEP)**: This project focuses on protecting the marine environment from pollution, including emissions from ships. The project involves the development of new monitoring and enforcement tools, as well as the implementation of new regulations and guidelines.

What's the role of EMSA in the EU?

EMSA is an agency of the European Union responsible for implementing the EU’s objectives in the field of maritime safety, maritime security, and the protection of the marine environment. EMSA’s mandate is to ensure compliance with EU regulations, to support Member States in implementing EU laws, and to provide technical and operational assistance to Member States and other EU bodies in the field of maritime safety, maritime security, and the protection of the marine environment.
