environment. An enabling factor is the development of data management systems for infrastructural projects. As such, it is possible to adapt equipment and/or process. The development of safety standards is an example of this.

In summary, the dredging industry has been influenced by new developments in technology and regulation. This has led to an increase in efficiency and sustainability in the industry. However, it is important to note that the industry still faces many challenges, such as the need for new infrastructure and the impact of climate change. Therefore, it is crucial to continue to invest in research and development to improve the industry's performance and sustainability.
